# Digital Payments

Consumer behavior is changing at an unprecedented pace and scale. Any process that can be done digitally will be – and chances are the consumer will expect them to be done in real-time.

At PAYOTEK Digital, we leverage innovation and focus on our collective strengths, to help our clients navigate this dynamic landscape. Our product engineering services are focused on enabling digital payments for our customers' products and services.

Combining the best practices of payments with the emerging digital tools and technologies, we help businesses re-imagine their payment models and payment methods to provide a seamless customer experience.

---

# Our Capabilities

- Enabling integrations with e-payment gateways, card APIs, and e-wallet platforms.
- Enabling frictionless payments with the help of NFC coupled with HCE, QR Code, Bluetooth, etc.
- Leveraging our in-house capabilities to deliver a mix of products and consulting services.

## Key Digital Payments Trends

### Biometric Authentication

Authenticate with a fingerprinting scanner, iris identification, facial recognition, vein mapping, etc.

### Mobile Point-of-Sales (mPOS)

Accept payments seamlessly on the go.

### Voice Payments

Initiate payments with voice commands over smart speakers

### Mobile Wallets

Send, receive and store money with your mobile device

### Contactless payments

Wave smartphones across the reader and complete payments
